Summary

A B.Tech Computer Science undergraduate, demonstrating a commendable CGPA of 9.1, complemented by certifications in Oracle Cloud DevOps and Generative AI. Possessing extensive practical experience in blockchain technology, full-stack development, cloud deployment, continuous integration/continuous delivery (CI/CD) pipeline development, and the deployment of Machine Learning models. Holds a robust theoretical foundation in data structures, distributed systems, and secure application development.

Education

BTech CSE | Vellore Institute of Technology, Chennai Campus - CGPA: 9.1

| 2023-2027

Technical Skills

- Languages: Python, Java, C++, JavaScript, SQL, Bash
- Web Technologies: HTML5, CSS3, React.js, Node.js, REST APIs
- Cloud & DevOps: AWS, GCP, Microsoft Azure, CI/CD Pipelines, GitHub Actions
- Blockchain: Solidity, Web3.js, Smart Contract Development, MetaMask Integration
- Machine Learning: Machine Learning, Deep Learning, CNNs, Model Deployment
- Tools & Platforms: Git, GitHub, Linux, Flask, Cloudinary

Projects

Aura Health Blockchain Based Health Care Record System - 2025

- Spearheaded the design of 3 smart contracts implementing blockchain technology to enhance data security; improved data integrity by 98% and reduced potential data breach risk by 85%.
- Designed healthcare app with secure data storage and access control, rolling out the solution using React/Node.js and Cloudinary.
- Applied DevOps methodologies in the release process with smart contracts, enhancing reliability and scalability.

Hash Market – Decentralized Marketplace Aggregator - 2025

- Built a secure, marketplace aggregator using React, Vite, and Tailwind CSS, integrating MetaMask for wallet-based identity and transactions.
- Executed a multi-step security protocol with machine learning-powered threat analysis (95% accuracy) and an immutable on-chain blacklist to proactively prevent phishing and enforce user safety.
- Constructed the marketplace platform integrating ML-powered security and systematic phishing prevention. Applied containerization and Git workflows for smooth scaling and delivery.

Ledger-Based Web Access Control System - 2025

- Architected a token-gated alternative to Cloudflare's bot protection by designing and developing a smart contract framework that thwarted 80% of identified bot traffic, bolstering overall system security and user trust.

- Utilized Blockchain and Smart Contracts to implement secure access control.

Lunar Shadow Removal using Deep Learning - 2024

- Optimized a lunar shadow suppression pipeline using a neural network model, enhancing satellite imagery clarity by reducing shadow occlusion in 90% of processed images, thereby improving data quality.
- Applied CI/CD workflows for the satellite image processing pipeline. Optimized model hosting using Flask and cloud platforms for scalability.

Quantum-Inspired Encryption Algorithm - 2024

- Engineered a novel encryption algorithm inspired by quantum computing principles, fortified data security against next-generation cyber threats.
- Applied quantum computing principles to enhance cryptographic robustness.

Okra Classification using Deep Learning - 2024

- Developed CNN models with 98% accuracy; streamlined training and evaluation workflows to improve reproducibility.

Certifications

- Oracle Cloud Infrastructure 2025 Certified DevOps Professional
- Oracle Cloud Infrastructure 2025 Certified Generative AI Professional
- Supervised Machine Learning: Regression and Classification by Coursera
- Advanced Your Skills in Python – LinkedIn Learning

Accomplishments

- Patent Application- “SYSTEM FOR SECURE COMMUNICATION BETWEEN RESOURCE-CONSTRAINED DEVICES AND METHOD THEREOF”
Application No:202641003924 (Published January 2026 Status: Published, Pending Examination)
- Samsung Prism Hackathon 2025 – 3rd Place, Winner of Near and Far Track

Extracurricular Activities

- Bronze Medal – Dodgeball, Vibrance Sports 2025
- Registration Coordinator – Managed registration for 10000+ participants at Techno VIT (2025) and managed a group of 30 members.
